

SLIM PARK

Specially designed for the **slim area** between the set-back lines and building, below grade arrangement, up to 6 levels deep, entrance can be lowered. Suitable for Permanent parkers, residential buildings, condominiums, office buildings.

We have two types of **Slim Parking** called as **Vertical & Cross**. We can also customize park space as required by user.

A) VERTICAL SLIM PARK

When there is more space in length than in width, the new **Slim park** shows off its merits. This slim system merely requires an installation width of 2.60 metres in narrow broad strips between buildings. It has been specially designed for the area between the set-back lines and building. Vehicles can be stacked up 6 levels deep in front of, and behind the lift. The ground level lid can be furnished with the most varying coverings and can be camouflaged to suit its surroundings.

Advantages :

- Semi-automatic parking systems for up to 23 cars
- Very small floor plan area and very slim construction
- Especially designed for the area between the set-back line and building
- System can be driven over when entrance is lowered
- Double row arrangement in front and behind the lift is possible, 1 empty place is required

B) CROSS SLIM PARK

The **Cross parker** offers an extension to the Slim parker as far as width is concerned. Two further grids can be arranged on each side left and right next to the central lift. In this way, the amount of parking spaces can be as much as doubled on the available ground surface. This system also lowers the entrance to ground level after use.

Advantages :

- **Semi-automatic parking systems for up to 23 cars**
- **Below grade arrangement especially designed for the area between the set-back line and building**
- **System can be driven over when entrance is lowered**
- **Double row arrangement longitudinal and lateral to the lift is possible, 2 empty places are required**
- **For platform loadings of 2000 kg to 2600 kg**
- **For various car height and length**
- **Very small floor plan area and very slim construction**
- **Installation width at the entrance area only 2.60 m**
- **No space-intensive ramps or driveways**
- **2- up to 4- row arrangement behind each other**
- **For multi-row arrangement an empty space is required**
- **Top platform can be covered individually based on customs wishes to suit to the surrounding**
